Director Agent: Reference Sources

Where each skill and design choice comes from. Click any underlined title to open the source.

Trust grade: A = official or primary page, opened or returned by search as the vendor's own domain. **B** = reputable secondary source. **C** = vendor blog or marketing, use as a hint only. Anything marked **VERIFY** must be checked against the official page before it becomes a rule. Sources are used for ideas, never copied; our skills are written originally.

1. Skill system and agent design

Source (click)	Grade	What the Director takes from it	Skill or component
Agent Skills overview (Claude Docs)	A	SKILL.md needs name and description; skills load progressively; use skills only from trusted sources	All skills; skill loader
Skill authoring best practices (Claude Docs)	A	Concise skills, third-person descriptions, test with real usage. Claims of a 500-line limit are secondary: VERIFY	Skill format and review checklist
Equipping agents with Agent Skills (Anthropic Engineering)	A	Three loading levels: metadata, body, bundled files	Folder layout: SKILL.md, references/, evals/

2. Shot recipes and motion knowledge (reusable library)

Source (click)	Grade	What the Director takes from it	Skill or component
video-shotcraft shot library	B	124 recipe cards, 150 shots, 10 categories; each has an intent, motion core, parameter table and pitfalls	motion-graphics; retrieval corpus
video-shotcraft repository (Apache-2.0)	B	Production method, card schema, Remotion implementations, 149 SFX with separate licences	Card index; method for procedure. Check ATTRIBUTION.md before using audio
Example card: crash-zoom-punch	B	Shows the card schema and usage limits such as at most two crash zooms per film. Written in Chinese	Validator rules; multilingual embeddings

3. Editing craft (Premiere Pro and film editing)

Source (click)	Grade	What the Director takes from it	Skill or component
Adobe: J-cut and L-cut	A	Split edits: audio leads or trails the picture change	editing-director
Adobe Help: J and L cuts in Premiere Pro	A	How the split edit is built in the editor; maps to timeline operations	editing-director; edit operations
Cutback: jump cut vs J-cut vs L-cut	B	Cut-type vocabulary; offset length is tuned by previewing	editing-director
No Film School: Murch's six cutting rules	B	Priority order: emotion, story, rhythm, eye trace, screen plane, 3D space. Weights are a heuristic. Original: Murch, In the Blink of an Eye	editing-director decision ranking
Murch's Rule of Six (thesis)	B	Academic write-up of the same criteria	editing-director references

4. Advertising strategy and hooks

Source (click)	Grade	What the Director takes from it	Skill or component
Benly: video ad structure frameworks	C	PAS and AIDA beat structures and timings; vendor content, treat as hypotheses	commercial-strategy
Hooked: script for an advertisement	C	Hook, problem, solution, CTA sequence; word-count guidance	commercial-strategy

Source (click)	Grade	What the Director takes from it	Skill or component
Oakgen: first-frame hooks for product ads	C	Open on a strong product visual; viewers decide in the first seconds	commercial-strategy hook rules
Higgsfield: product video ad guide	C	Example shot timing for a 10-11 s spot; promotional source	Test case ideas only

5. Cinematography and motion design

Source (click)	Grade	What the Director takes from it	Skill or component
CSUS: Elements of cinematography	B	Framing, angles, continuity basics	cinematography
Videomaker: the 180-degree rule	B	Axis rule and when it matters	cinematography continuity check
GitLab Design: brand motion	B	Easing, purposeful motion, contrast and hierarchy	motion-graphics

6. Platform specs and sound (all values must be verified)

Source (click)	Grade	What the Director takes from it	Skill or component
EBU R 128 (official)	A	Broadcast target -23 LUFS, +/-0.5 LU, true peak -1 dBTP. Broadcast only, not social	sound-design; QA loudness check
Ignite Social: Reels and TikTok safe zones	C	Safe-zone figures differ between sources: VERIFY in Meta Ads Manager and TikTok's safe-zone files	motion-graphics safe areas
Adkit: Instagram ad safe zones	C	Third-party Instagram margins; VERIFY	platform_specs collection
Poster.ly: TikTok safe zone checker	C	Third-party TikTok margins; VERIFY	platform_specs collection
Argil: Instagram Reel specs	C	Source of the -14 LUFS claim; single blog, VERIFY before use	sound-design (config only)

7. RAG, orchestration and tooling

Source (click)	Grade	What the Director takes from it	Skill or component
Anthropic: Introducing Contextual Retrieval	A	Prepend short context to each chunk; combine with BM25 and reranking. Percent gains come via press coverage: VERIFY in the post	Chunking and indexing
InfoQ: Contextual Retrieval summary	B	Reported failure-rate cuts of 35%, 49% and up to 67%	Benchmark expectations only
Qdrant: hybrid search	A	Sparse plus dense prefetch fused with RRF; syntax varies by version, check yours	Retriever (later phase)
Qdrant: hybrid and multi-stage queries	A	Multi-stage queries and rerank	Retriever (later phase)
BGE-M3 model card (NVIDIA mirror)	B	Dense, sparse and multi-vector in one model; 100+ languages; 8192 tokens. Official BAAI page not retrieved: VERIFY	Multilingual embeddings
LangGraph.js persistence	A	Checkpointer saves state per step; threads	Orchestrator state and resume
LangGraph.js human-in-the-loop	A	interrupt() pauses for approval and resumes with a Command	Approval gate
Remotion licence FAQ	A	Free for up to 3 employees; companies of 4 or more need a paid licence. Check before commercial use	Rendering decision
Remotion licence text	A	Legal terms; notes a licence change in Remotion 5.0	Rendering decision
FFmpeg filters documentation	A	Official reference for blackdetect, freezedetect, silencedetect, ebur128, loudnorm. Not yet opened by me: confirm option names	Technical QA checks

8. How these sources make the Director smarter

1. **Retrieval, not memorisation:** cards and notes are fetched per decision, with the source ID attached so every choice is traceable.
2. **Rules with confidence tags:** grade A sources become firm rules; B and C become flagged hypotheses that benchmarks can promote or drop.
3. **Hard boundaries:** the validator uses card parameter ranges and usage limits, so the Director cannot output an impossible or repetitive plan.
4. **Measured improvement:** each source is tied to an eval question, and a change is kept only if retrieval and plan-quality scores improve.

9. Known gaps

No official Meta or TikTok ad-spec pages were returned, so every platform number above is unverified. The official BAAI BGE-M3 page, Murch's book and Anthropic's original percentages were not read directly. I did not find a high-quality, licence-clear corpus of professional product-commercial directing; that part will rely on our own original notes and your approved examples.
